

Hunger & Fullness Rating Scale Tool

1. The Hunger & Fullness Scale

1-3: Not Hungry / Satiated

- Completely comfortable, no desire to eat.

4-6: Mild to Moderate Hunger

- Initial stomach growling, thoughts of food are pleasant.

7-10: Starving / Primal Hunger

- Dizziness, intense focus on food, loss of control if unchecked.

2. The Primal Hunger Rule

Rule: If you are at 8-10 (Primal Hunger) when you start your breakfast meal, your portion must be strictly smaller and eaten significantly slower. (Add detail: to avoid digestive discomfort and rapid blood sugar spikes, allowing satiety signals to catch up.)

3. Daily Check-In Worksheet

Hunger Rating (1-10) when I start:

Current physical sensations, energy level.

Fullness Rating (1-10) after 10 minutes:

How much food consumed, any change in hunger sensation.
